Introduction

With [Tap to Pay on iPhone](#), merchants can now accept all types of in-person contactless payments right on their iPhone. From physical debit and credit cards, to Apple Pay and other digital wallets with no extra terminals or hardware needed.

To ensure a seamless Tap to Pay on iPhone experience for merchants from discovery to checkout, use this guide to learn how to design and build your app to meet Apple's requirements. The guide also walks you through the app publication process and helps you prepare to submit your app for review, as well as outlining how to market your App using the Tap to Pay on iPhone Marketing Guide and Toolkit.

Overview

To release an app with Tap to Pay on an iPhone, follow these steps:

1. Request and receive the development entitlement.
2. Design & build your app to meet the requirements.
3. Request and receive the publishing entitlement.
4. Submit your app to the App Store (for Apple Developer Program).
5. Publish your app for general availability.
6. [Market your app](#) using the Tap to Pay on iPhone Marketing Guide and Toolkit.

Entitlements

To enable Tap to Pay on iPhone in your app, you must request two separate [entitlements](#) from Apple: a development entitlement and a publishing entitlement. These entitlements are available through the Apple Developer Program and the Apple Developer Enterprise Program. For guidance on using entitlements in your app, refer to the [“Setting up the entitlement for Tap to Pay on iPhone” guide](#).

Important

Your app needs to leverage an SDK or API from a Payment Service Provider (PSP) approved by Apple. To be approved, your entitlement request must indicate an approved PSP for your chosen region. For a list of approved PSPs for your region, see the [Tap to Pay on iPhone developer page](#).

Development entitlement

To receive the development entitlement, [submit the entitlement request form](#). This form requires information about your app(s), the approved PSP(s) you’re working with, and the regions where you plan to deploy your app.

The development entitlement allows you to build and test your Tap to Pay on iPhone implementation.

Details on how to use a development entitlement can be found in this article [Create a development provisioning profile](#).

Important

For both the Apple Developer Program and the Apple Developer Enterprise Program, development entitlements are restricted to devices registered to your Apple Developer account and only support development provisioning profiles.

Publishing entitlement

Once you’ve built an app that meets the user experience requirements for Tap to Pay on iPhone, you can request the publishing entitlement by following the instructions in the [email](#) you receive granting your development entitlement. The email contains information about the materials you need to submit to receive the publishing entitlement. The materials you’ll need to provide include UI flows, and video recordings of the [Tap to Pay on iPhone user experience](#) in your app. Apple also asks for a completed checklist to show that you’ve met all app review requirements. Once your app review is successful, Apple will provide you with the publishing entitlement.

Important

The publishing entitlement is required to use [TestFlight](#). As a result, your app must meet the [in-app user experience requirements](#) before you can distribute the app outside of your development teams.

The publishing entitlement lets you publish your app to the App Store through the Apple Developer Program. Alternatively, you can distribute it to employees and internal stakeholders via the Apple Developer Enterprise Program. Published apps will undergo the standard App Store Review process.

App Design

When planning your app integration, consider the user experience of Tap to Pay on iPhone, from discovery to checkout. Use the provided guidelines and resources to design your app to meet the requirements for Tap to Pay on iPhone.

Common app types

The distribution path and typical use case for your app significantly influence its ideal design and user experience. Explore how various app types interact with Tap to Pay on iPhone, along with the design considerations for each.

Point-of-sale app

The most common type of app used with Tap to Pay on an iPhone is a payment acceptance or point-of-sale (POS) app. These apps allow you to accept payments using various methods, and Tap to Pay on iPhone can be the default or one of many options, including external hardware or terminals.

If your app's primary purpose is payment acceptance, and Tap to Pay on iPhone is the only accepted method, inform users that it's the only way to accept payments. Additionally, educate users on the accepted payment methods. If contactless cards aren't accepted by Tap to Pay on iPhone, consider alternative payment methods. Keep in mind that some payment methods may have restrictions, such as manual key entry being prohibited for in-person payments in the EU and UK under PSD2 regulation.

Apps with a mixed user base of businesses and consumers

In some cases, Tap to Pay on iPhone is provided only to a subset of the app user base. For example, a banking or P2P (peer-to-peer) payment app can limit payment acceptance to business users while the app serves both consumer and business users.

For apps with diverse user demographics, limit the Tap to Pay on iPhone feature and ensure it's prominently displayed to the appropriate user type within the app. It's important to note that Tap to Pay on iPhone is not authorized for peer-to-peer (P2P) payment acceptance. However, you can leverage Tap to Pay on iPhone as an incentive to encourage consumer users to create a merchant or business account.

Design resources

Apple offers several resources to help you design your app for compatibility with Tap to Pay on iPhone. As you plan and build your Tap to Pay-enabled app, refer to these design resources.

- [Human Interface Guidelines \(HIG\)](#)
- [Tap to Pay on iPhone Design Template](#)
- [Tap to Pay on iPhone Marketing Guide and Toolkit](#)

Human Interface Guidelines

The [Human Interface Guidelines \(HIG\)](#) offer valuable guidance and best practices for designing exceptional experiences on Apple platforms. Specifically, the HIG for [Tap to Pay on iPhone](#) focuses on key moments in the user journey, providing insights on how to effectively utilize Apple design principles to create a familiar and intuitive experience. By adhering to the HIG, developers can maximize the features built into iOS and ensure a consistent and intuitive user experience.

Tap to Pay on iPhone Design Template

The [Apple Design Resources](#) provide helpful tools for designing and developing your Tap to Pay app for the iPhone. The [Tap to Pay on iPhone Design Template](#) is a great way to create mockups of the Apple-provided UI screens. When using this template, ensure it's paired with the most current [product bezels](#) at the time of creation. Remember, using the design template and product bezels in App Store listings must comply with the [App Store Marketing and Identity Guidelines](#).

Tap to Pay on iPhone Marketing Guide and Toolkit

When marketing Tap to Pay on iPhone to your merchants, partners, and customers, use the Tap to Pay on iPhone Marketing Guide and Toolkit. This toolkit contains Apple-approved assets for in-app and other marketing and communication channels. However, you can't create your own customized marketing and communication content, images, or videos. Instead, you can only use the Apple-approved marketing templates, which offers various customization options. For more information, see the [Marketing Your App](#) section of this document.

Other helpful resources

- [Merchant FAQs for Tap to Pay on iPhone](#)
- [Xcode version 14.3 and later](#) allows you to simulate the Tap to Pay on iPhone UI in Xcode simulator
- [Merchant education explainer videos](#).

User Experience Requirements

Tap to Pay apps available through the public App Store must offer a user-friendly experience to help merchants onboard and accept payments easily. This section explains the various stages of the user journey and the requirements your app must meet to receive publishing rights.

Important

User experience requirements will vary based on your app type and distribution method.

The Tap to Pay on iPhone user journey consists of four main parts:

- Onboarding merchants
- Enabling Tap to Pay on iPhone
- Educating merchants
- Checking out

General requirements

An app using Tap to Pay on iPhone must function independently of any additional secondary apps. For instance, a merchant should be able to open your app and navigate through the Tap to Pay on iPhone onboarding and checkout process without needing other apps.

If you're considering allowing third-party apps to invoke your app for Tap to Pay on iPhone functionality, you must also provide an SDK that these third parties can directly integrate into their applications.

Additionally, if your Tap to Pay on iPhone app allows users to accept payments when starting the checkout flow from a different device, such as an iPad or a website, the user should be able to complete payment acceptance using the iPhone app as a standalone app, without needing another device or interface.

Other general requirements are outlined below. Specific requirements are detailed for each section of the user journey. The requirement number corresponds to the section listed in the requirements checklist you complete for the app review with Apple.

General Requirements Checklist		
1.1	Required	Your app must support Tap to Pay on compatible iPhone devices, specifically iPhone XS and later.
1.2	Conditional	If your app uses Tap to Pay on iPhone as its primary payment method, you must set the iOS Deployment Target in Xcode to the minimum version that supports your Tap to Pay configuration. Verify this minimum version with your PSP's SDK documentation.
1.3	Conditional	If your app uses Tap to Pay on iPhone as its primary payment method, ensure compatibility by requiring iPhone and iPad users with the A12 minimum performance and UIRequiredDeviceCapabilities .
1.4	Required	For iOS versions prior to 17.6, your app must handle the <code>PaymentCardReaderError.osVersionNotSupported</code> error by displaying a message informing the user that they need to update to the latest iOS version.
1.5	Required	At the launch of your app or when it comes to the foreground, your app must trigger the initial preparation and warming-up of Tap to Pay on an iPhone. For more details, please refer to your PSP's SDK documentation.
1.6	Required	For the status of whether a merchant has accepted Tap to Pay on iPhones, retrieve it from Apple instead of storing it in a local variable in your app. Refer to the PSP's SDK documentation for more details.
1.7	Recommended	Merchants should be able to use FaceID or TouchID for a seamless login experience on apps available on the public App Store.
1.8	Conditional	Apps published via the public App Store must follow the Human Interface Guidelines .
1.9	Conditional	Apps published via the public App Store must follow the Tap to Pay on iPhone Developer Marketing Guidelines , which are based on the Tap to Pay on iPhone Marketing Guide and Toolkit .

Onboarding merchants

Apple mandates an in-app digital onboarding process for apps on the public App Store. Digital onboarding involves creating a new account to access the app, and, if applicable, setting up a separate merchant account for payment processing. The number of accounts required depends on your app's implementation and the payment service provider.

During digital onboarding, users register as authorized merchants to accept payments using Tap to Pay on iPhone. While you can require additional verification for some users, like through background checks or risk assessments, ensure most users who meet your requirements can complete onboarding quickly and easily within your app. This process is usually handled by your PSP partner.

If your local regulations allow, ensure the onboarding process takes an average of 15 minutes from the merchant submitting their application to accepting their first payment.

If merchant approval isn't immediate, confirm approval through multiple channels like push notifications, email, SMS, and so on. This will guide users back to your app to complete the merchant onboarding process.

Allow existing users, such as merchants, business account owners, and consumer account owners, to access Tap to Pay on iPhone using their existing login credentials. If a merchant can't use their existing credentials, provide a path in your app to create the necessary credentials for Tap to Pay on iPhone. Whenever possible, minimize the need for multiple login credentials, such as one for the app and another for PSP and merchant services.

Allow business owners to create restricted credentials for their employees to use Tap to Pay on iPhone, whether on company-owned devices or personal devices.

If [location services](#) or other system permissions are required for your app, communicate to users during onboarding why they're necessary with a [pre-alert screen](#). Your app must request these permissions well in advance of the checkout flow.

Requirements for Onboarding Merchants

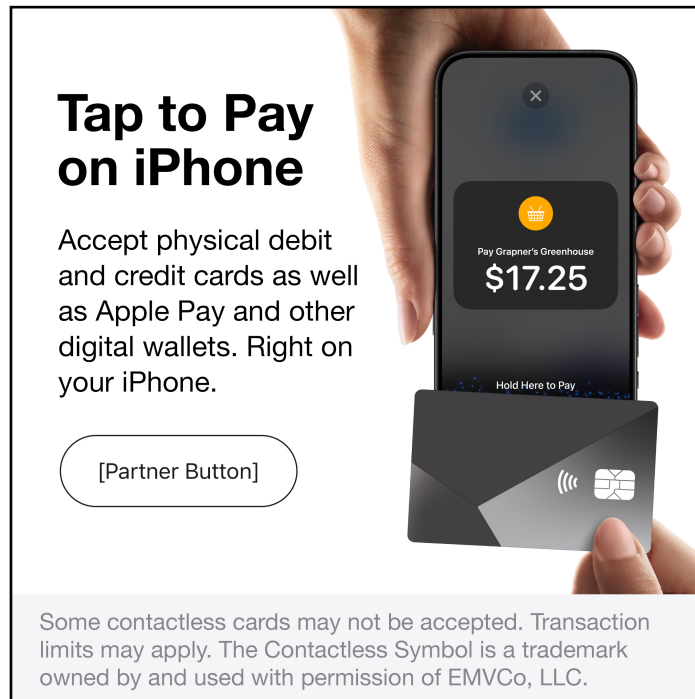

These requirements apply to all apps published through the public App Store. If your app lacks a user onboarding mechanism, you must distribute it through programs like [Unlisted Apps](#), [Custom Apps](#), or the [Apple Developer Enterprise Program](#) (ADEP). Alternatively, you can request an exception when applying for your Publishing Entitlement.

Onboarding Merchants Requirements Checklist		
2.1	Required	A new user who downloads your app should be easily able to discover the process for creating an account and accessing Tap to Pay on iPhone.
2.2	Required	Creating an account and accessing Tap to Pay on iPhone requires a fully digital onboarding experience within the app. This experience must be fully completed on an iPhone.
2.3	Required	For most users, digital onboarding should take less than 15 minutes*. This includes submitting information or requesting access for existing merchants, followed by accepting payment using Tap to Pay on an iPhone. *In compliance with local merchant onboarding regulations.

Enabling Tap to Pay on iPhone

Apple mandates that any app on the public App Store include at least one in-app awareness moment for all eligible users. This notification informs both new and existing users about the availability of Tap to Pay on iPhone.

As a best practice, present the awareness moment as a full-screen modal. You can also use multiple awareness moments through in-app notifications, information cards, or notification badges. For Apple-approved assets and copy, refer to the Tap to Pay on iPhone Marketing Guide and Toolkit, specifically the section titled “[Marketing Your App](#).”

Example of Apple-approved in app awareness moment.

For new users, enabling Tap to Pay on iPhone should be part of the digital onboarding process after a merchant is approved for in-person payment acceptance. For instance, after a new merchant is approved, present a full-screen modal to allow them to enable Tap to Pay on iPhone immediately. While your app isn't required to make this mandatory, ensure merchants have the chance to enable it as soon as possible. This prevents delays during critical moments, like right before accepting a customer's payment.

Important

When testing your implementation, to re-trigger the Merchant Terms and Conditions on your device, unlink the Apple Account you used to accept them. Follow this [link](#) to do so. You can then re-test your first-time enablement flow without creating a new merchant.

To prompt a brand-new device configuration, uninstall all Tap to Pay applications from your iPhone. This will remove all payment acceptance configurations, allowing you to re-test your configuration progress indicator without using a new device.

For existing users, your app should provide at least one communication to inform them that Tap to Pay on iPhone is available. As a best practice, offer multiple communications, including a full-screen modal on login, to encourage existing users to enable it. Refer to the Tap to Pay on iPhone Marketing Guide and Toolkit for Apple-approved assets and copy.

Requirements for Enabling Tap to Pay on iPhone

These requirements apply to all apps published through the public App Store

If you distribute your app with programs such as [Unlisted apps](#), [Custom apps](#), or the [Apple Developer Enterprise Program](#) (ADEP) these requirements are applicable only if users are expected to accept terms and conditions using an Apple Account on the iPhone.

For enterprise distribution where there is no Apple Account in use on the device, make preparations to accept Terms and Conditions on behalf of an organization in [Apple Business Connect](#). For more details on this process refer to your PSP's SDK documentation.

If you need to reset the terms and conditions acceptance of an Apple Account for testing or demonstration you can do this on [Apple Business Connect](#).

Enabling Tap to Pay on iPhone Requirements Checklist		
3.1	Required	Your app provides highly visible and easily discoverable communication for Tap to Pay on iPhone.
3.2	<i>Recommended</i>	Your app implements a full-screen modal (splash screen) for Tap to Pay on iPhone. <i>(This also fulfils Marketing requirement 6.2.)</i>
3.3	Required	Your app should display communications about Tap to Pay on iPhone to all eligible users at least once. This can be done using a push notification. <i>(This also fulfils Marketing requirement 6.3.)</i>
3.4	Required	Your app clearly shows how to enable Tap to Pay on iPhones at the end of every new merchant onboarding process.
3.5	Required	Your app must offer a clear action to accept the Tap to Pay on iPhone Terms and Conditions.
3.6	Required	Your app must allow users to enable Tap to Pay on iPhone outside of the usual communications and checkout flow, such as through your app settings.
3.7	Required	Your app must either provide a trigger to enable Tap to Pay on iPhone within the checkout flow or require Tap to Pay on iPhone to be enabled before the checkout flow.
3.8	Required	Tap to Pay on iPhone Terms and Conditions must only be accepted by an administrator user or otherwise authorized party.
3.8.1	Required	If a user isn't authorized to accept Tap to Pay on iPhone terms and conditions, display a message instructing them to contact an admin to enable it.
3.8.2	<i>Conditional</i>	For enterprise deployments, including Custom Apps, Unlisted Apps, or the Apple Developer Enterprise Program, you must enable the ability to accept Terms and Conditions outside the app using Apple Business Connect. Please consult your PSP for implementation details.

Enabling Tap to Pay on iPhone Requirements Checklist		
3.9	<i>Recommended</i>	Once the user accepts the Terms and Conditions and completes the tutorial on using Tap to Pay on their iPhone, your app presents a dedicated screen inviting them to try it out.
3.9.1	Required	Your app must display a configuration progress indicator using <code>PaymentCardReader.Event.updateProgress(_:)</code> (or the equivalent call from your PSP SDK). This screen will show the progress of Tap to Pay on iPhone readiness as the device is being configured. It will also inform the user that Tap to Pay on iPhone isn't ready for use during both initial setup and typical usage while the reader is preparing.

Educating merchants

Your app must include merchant education as part of the in-app user experience. This education should begin **after** the merchant accepts the Tap to Pay on iPhone Terms and Conditions. With iOS 18 and later, you can use the [ProximityReaderDiscovery](#) API to easily display merchant education for Tap to Pay on iPhone. Apple will ensure the content is current and localized for your merchant's region.

For merchant education outside your app (like print, web, or email), use the Apple-approved assets and copy available in the [Tap to Pay on iPhone Marketing Guide and Toolkit](#) (see the “[Marketing your app](#)” section below). This will help you create a merchant education experience for your app that aligns with Apple guidelines.

Requirements for Educating Merchants

These requirements apply to all apps published through the public App Store

If you distribute your app through programs like [Unlisted Apps](#), [Custom Apps](#), or the [Apple Developer Enterprise Program](#) (ADEP), it's strongly recommended that you meet the Educating Merchants requirements. However, these requirements are not mandatory if you provide merchant education through other means.

Educating Merchants Requirements Checklist		
4.1	Required	Use ProximityReaderDiscovery to educate merchants on iOS 18 and later. <i>(This fulfills requirements 4.4, 4.6, 4.7 and 4.8)</i>
4.2	Required	Your app must display educational screens after the user accepts the Terms and Conditions.
4.3	Required	Your app should provide merchant education resources in either the Settings or Help section for easy reference.
4.4	Conditional	For merchant education outside your app, use the Apple-approved Tap to Pay on iPhone Marketing Guide and Toolkit to create your merchant education screens.

Educating Merchants Requirements Checklist		
4.5	Required	Merchant education should demonstrate how to accept contactless cards using Tap to Pay on an iPhone.
4.6	Required	Merchant education should demonstrate how to accept Apple Pay and other digital wallets using Tap to Pay on iPhones.
4.7	Conditional on Region	Merchant education must explicitly mention PIN entry and the accessibility options available on the PIN screen if PIN entry is supported in your region. Refer to the Regional Requirements for more details.
4.8	Conditional on Region	Merchant education must mention the fallback to an alternate payment method, such as Payment Link, if Tap to Pay on an iPhone is unable to read a payment card in a region that requires a fallback payment method. Refer to the Regional Requirements for more details.

Checking Out

To ensure a fast and seamless checkout experience, prepare Tap to Pay on iPhone in the background when your app opens to accept payments without delays. Consult your PSP SDK documentation for details on preparing Tap to Pay on iPhone, either when the user opens the app or when it transitions to the foreground. We recommend preparing Tap to Pay on iPhone as early as possible in your app initialization flow to minimize the any configuration delays at checkout.

Your app should prominently display the Tap to Pay button during payment acceptance and use the appropriate copy to reflect the number of available payment methods. For details on displaying the button, refer to the [Human Interface Guidelines \(HIG\)](#) and the [Localization strings for Tap to Pay on iPhone](#).

Requirements for Checking Out

These requirements are applicable for all apps.

Checking Out Requirements Checklist		
5.1	Required	The user should have a clearly visible and prominent button to initiate a Tap to Pay on an iPhone transaction during checkout.
5.2	Required	The button that activates Tap to Pay on an iPhone must be easily accessible, without requiring scrolling, for the user to select during checkout. When multiple payment options are available, Tap to Pay should be positioned at the top of the list.
5.3	Conditional	The button that activates Tap to Pay on an iPhone should never be altered, greyed out, or otherwise obscured, regardless of whether the user has enabled Tap to Pay on iPhone. If the user hasn't yet enabled it, pressing the button will automatically open the acceptance of Tap to Pay on iPhone Terms and Conditions. <i>This requirement is conditional on whether a user can accept Tap to Pay terms and conditions on their iPhone with an Apple account.</i>

Checking Out Requirements Checklist		
5.4	<i>Conditional</i>	If your region has multiple payment options, the button that triggers Tap to Pay on an iPhone should use the appropriate copy. For more details, refer to the Localization strings for Tap to Pay on iPhone.
5.5	<i>Conditional</i>	When using iconography in the button, the symbol must be either "wave.3.right.circle" 🌊 or "wave.3.right.circle.fill" 🌊 from SF Symbols .
5.6	Required	When user presses the Tap to Pay on iPhone button, the Tap to Pay on iPhone UI should come up within one second at least 90% of the time. Refer to your PSP's documentation on how to "prepare" or "warm-up" the reader in advance.
5.7	Required	When users presses the Tap to Pay on iPhone button, but it's still being configured, they should see an "initializing" screen indicating that Tap to Pay will be available soon.
5.8	Required	After a successful card read, the iPhone's Tap to Pay screen should transition to a "processing" screen indicating the transaction is underway.
5.9	Required	After the processing screen, the user should be clearly informed of the transaction's outcome, whether it was approved, declined, or timed out.
5.10	Required	Regardless of whether a transaction is approved or declined, it must be possible to send a confidential digital receipt to the customer. This could be done via SMS, email, QR code, or Activity views .
5.11	<i>Conditional on Region</i>	Ensure compliance with regional requirements based on your app's deployment location. For more details, refer to the Regional Requirements section.

Entitlement and App Review

There are two steps to the review process. First, submit your app for review to obtain the publishing entitlement. If your app meets the requirements outlined in this guide, you'll receive the Publishing entitlement, allowing you to proceed. Once you're ready to distribute your app further, complete the App Store review and submission process.

This section explains how to submit your app for review to secure the publishing entitlement and how to submit it to the App Store for public distribution.

Important

For the Apple Developer Enterprise Program, Apple grants the publishing entitlement for each app or Bundle ID. Each individual app requires a separate review and approval.

Once you receive your publishing entitlement, you'll be able to distribute your app more widely. The app submission process depends on your chosen distribution method.

Distribution Method	App Submission
App Store, Custom App or Unlisted App	Use App Store Connect to submit app for App Store review and distribution
Apple Developer Enterprise Program	Use Apple Business Manager or Apple School Manager with Mobile Device Management to distribute app to enterprise devices

Entitlement review

As part of the publishing entitlement review, you must create and submit a video recording of your app completing the following flows:

- Onboarding flow (required for all apps published through the public App Store)
- Enabling Tap to Pay on iPhone and Educating Merchants flow
- Checkout flow

Important

Use another device to record the Checkout flow video as the Tap to Pay on iPhone UI screens won't work for screen recordings.

Onboarding flow

Provide a video recording of the onboarding flow for a new user. The recording must show the following:

- The path for new merchant onboarding, including account creation and know your customer (KYC) where applicable.
- Once a merchant account is approved, show how Tap to Pay on iPhone is introduced to the new merchant in this path.

If your app does not provide a path for a new user to onboard within the app, provide details on how new users onboard to become merchants.

Enabling Tap to Pay on iPhone and Educating Merchants flow

Provide a video recording of the Tap to Pay on iPhone enablement flow for an existing user. The recording must show the following:

- How an existing user will become aware that Tap to Pay on iPhone is available.
- How a user will accept Terms and Conditions for Tap to Pay on iPhone.
 - Include all other paths of acceptance (e.g. via Settings, Checkout flow, etc)
- Merchant education is provided to the new merchant after accepting Terms and Conditions.
- Where a user can find merchant education at a later time. (e.g. via Settings)
- If the user completes or skips merchant education before configuration is complete, show a progress indicator to the user to inform them of Tap to Pay on iPhone configuration status.

Checkout user flow

Provide a video recording of the Tap to Pay on iPhone user flow during checkout (for this video the configuration of Tap to Pay on iPhone should be complete). The recording must show the following:

- Adding items to a cart, or entering an amount for payment.
- List of the payment options (if applicable).
- The Tap to Pay on iPhone button.
- An intermediate initializing screen (if Tap to Pay on iPhone takes more than 300ms to open)
- A successful Tap to Pay on iPhone transaction.
- PIN entry (in regions where applicable - see [Regional Requirements](#) for more details).
- Fallback Payment mechanisms (in regions where applicable - see [Regional Requirements](#) for more details).

App Store submission

You can submit your app for App Store review once you receive your publishing entitlement. If you're submitting a new app, not an update, review and follow the [App Store Review Guidelines](#). Use the Apple-approved assets from the [Tap to Pay on iPhone Marketing Toolkit](#). However, don't include Tap to Pay on iPhone in your app's name, as this conflicts with [App Review Guideline 5.2.5](#). Apps submitted with a Tap to Pay on iPhone entitlement also undergo a special review by the App Store Review team.

To ensure a smooth review process, please include the following with your App Store Connect submissions as you prepare for your app's launch:

- Declare that you are using the Tap to Pay on iPhone entitlement
- Share details on your Tap to Pay on iPhone use case (for example, a point-of-sale app for merchants)
- Credentials for a test user account for the App Store team to review the checkout flow and the Tap to Pay on iPhone screens.
 - If you're unable to provide a test account, explain why.
 - If your app is geo-fenced, provide details on the geo-fenced regions.
- Upload one of the following:
 - A video walkthrough of your Tap to Pay on iPhone checkout experience, from sign-in to checkout.
 - High-fidelity wireframes of your Tap to Pay on iPhone checkout experience, from sign-in to checkout.
- Don't mention MDM in the app details. Including MDM may flag the app for unnecessary review.
- If your app will be released using a feature flag, specify the release method.

After you submit your app for review, the App Review team may request additional information. The response may appear as a rejection in App Store Connect, but the message body explains that rejection is a request for information. Respond to the message to provide additional information to the App Review team.

App Store product page

Your App Store product page must adhere to the Tap to Pay on iPhone Marketing Guide.

If you distribute your app in regions where Tap to Pay on iPhone isn't supported or available, ensure that you update only the appropriate regional app descriptions and images. For example, if your app is available in the US and the UK, but you are launching Tap to Pay on iPhone only in the UK, add the English UK language to your [product page](#) to update or create only the UK-specific app description and image assets.

Consider creating [custom product pages](#) if you are running specific promotional or targeted marketing campaigns.

App Publishing for General Availability

When your app is ready for production, you can choose from various approaches to release your app.

You can release the app for immediate general availability, or you can consider one of the following approaches to stagger your release:

- Phased release
- Flagged release

Phased release

Rather than releasing your app to all of users at once, you can choose to ramp up the number of users to stress test your systems (for example, onboarding and support).

You can use the [App Store phased release](#) feature, or you can hide the Tap to Pay on iPhone functionality behind an in-app feature flag that you control on your back end.

Flagged release

If you are updating a published app, implement an in-app feature flag that you control on your back end to release the updated app.

Using a feature flag allows you to publish and test your app early and helps ensure that most users have upgraded to the version that supports Tap to Pay on iPhone when you are ready to remove the flag to make the feature available for everyone.

If you choose a flagged release, only update your App Store product page with Tap to Pay on iPhone messaging when you submit the app to make the feature available for all users in a region.

Important

You must wait for your app to be in full general availability before going live with marketing and communications content, except for in-app merchant education and awareness.

Regional Requirements

Learn about the regional requirements for publishing your app.

Important

Make sure to set the correct language in Xcode for your app for the Tap to Pay on iPhone screens to be properly localized. See [here](#) for details.

Publishing your app in multiple regions

When publishing your app in multiple regions include the following regional requirements in your app.

Localization strings for Tap to Pay on iPhone

Use the correct button name for the languages your app is published in.

Language	Long Form	Short Form
Arabic	iPhone مرر للدفع على	-
Bulgarian, Ukrainian	Tap to Pay на iPhone	Tap to Pay
Catalan	Tap to Pay a l'iPhone	Tap to Pay
Chinese (Hong-Kong)	iPhone 拍易收	-
Chinese (Taiwan)	iPhone卡緊收	-
Croatian	Tap to Pay na iPhoneu	Tap to Pay
Czech, Slovenian	Tap to Pay na iPhonu	Tap to Pay
Danish, Norwegian, Swedish	Tap to Pay på iPhone	Tap to Pay
Dutch	Tap to Pay op iPhone	Tap to Pay
English	Tap to Pay on iPhone	Tap to Pay
Estonian	Tap to Pay iPhone'is	Tap to Pay
Finnish	iPhonen Tap to Pay	Tap to Pay
French	Tap to Pay sur iPhone	Tap to Pay
French Canadian	Paiement rapide sur iPhone	-
German	Tap to Pay auf dem iPhone	Tap to Pay
Greek	Tap to Pay στο iPhone	Tap to Pay
Hungarian	Tap to Pay az iPhone-on	Tap to Pay
Italian	Tap to Pay su iPhone	Tap to Pay
Japanese	iPhoneのタッチ決済	-
Latvian	Tap to Pay ar iPhone	Tap to Pay
Lithuanian	„Tap to Pay“ su „iPhone“	„Tap to Pay“
Polish	Tap to Pay na iPhonie	Tap to Pay
Portuguese	Tap to Pay no iPhone	Tap to Pay
Romanian	Tap to Pay pe iPhone	Tap to Pay
Slovak	Tap to Pay na iPhone	Tap to Pay

Language	Long Form	Short Form
Spanish	Tap to Pay en iPhone	Tap to Pay

Regional requirements

Requirement	Region
PIN Entry in Education	All regions except JP, TW
Fallback Payment Method	CA, GL, IE, IM, JE, UK
Surcharging	AU, BR
IFR	BE, DE, DK, FR, NO

PIN Entry in Education

Under certain circumstances, a customer may be prompted to enter their card PIN when using Tap to Pay on an iPhone. In regions where PIN is a standard part of the checkout process, merchants must provide PIN entry and accessibility details in their merchant education. For more information, refer to the Tap to Pay on iPhone Marketing Guide and Toolkit, which includes Apple-approved PIN in-app assets and copies. You can also consult the table above to see which regions require PIN as part of merchant education.

Fallback Payment Method

In regions where a significant number of cards cannot be used with contactless under specific circumstances (e.g. Offline PIN markets), the app must support *at least one (1)* accepted alternative payment method and fulfill the following requirements:

- All merchants must be set up with *at least one (1)* accepted alternative payment method so that all transactions can be completed in person. Check with your PSP for accepted alternative payment methods.
- Ensure the app provides a seamless transition between the Tap to Pay on iPhone UI and the accepted alternative payment method provided for the merchant.
- Provide details on the fallback mechanism as part of the [merchant education](#).
- If you are creating your own merchant education screens, please use the following copy when educating users on Fallback Payment Method.
 - *Some cards are not able to complete contactless transactions using a PIN. If this occurs, simply ask the customer if they have an alternative contactless card or digital wallet and continue the transaction using Tap to Pay on iPhone.*

Surcharging

If your PSP supports surcharges for payments, your app must display them to the paying customer.

For *blended rate surcharge* (the same rate applies to all cards), the final amount as well as the surcharge amount shown on the Tap to Pay screen on an iPhone should reflect this. For example, if a payment is \$100 with a 2% surcharge, the paying customer should see \$102 as the total amount on the iPhone Tap to Pay on iPhone screen with a note that says "Includes a \$2 surcharge". Use the [surchargeAmount](#) API to display this.

For variable surcharges per card brand your app should display the maximum possible percentage on the Tap to Pay on iPhone screen using the [surchargePercent](#) API. For example, if a payment is \$100 with a maximum 3% surcharge - the Tap to Pay on iPhone screen should show \$100 as the total amount with a note that says "A maximum 3% surcharge may apply".

The receipt must provide details on the purchase amount and the surcharge.

Important

Itemization is required on digital receipts to meet governance requirements in some regions.

IFR

In EU markets with a domestic payment network and if your PSP terminal profile supports it, the app (or PSP SDK) must offer an optional method for the customer to select a preferred card brand before tapping their card.

Marketing Your App

When marketing Tap to Pay on iPhone, please note that you may not develop your own customized marketing and communications content, images or videos on Tap to Pay on iPhone. Apple has developed a comprehensive Tap to Pay on iPhone Marketing Guide and Toolkit to support you when marketing the availability of Tap to Pay on iPhone to your merchants, partners and customers.

The Tap to Pay on iPhone Marketing Guide and Toolkit provides a wide range of Apple-approved marketing assets and templates for you to use in your marketing and communication channels.

You should only leverage the Apple-approved marketing templates which allow for light customization options, including inserting brand colors, custom fonts, custom card art and your logo into the assets.

The Apple-approved assets and templates include:

- Display banners
- In-app banners
- Social media tiles
- Lifecycle emails
- Website banners
- Dedicated product page
- Product animations

In addition to the Tap to Pay on iPhone Marketing Guide and Toolkit, you will also be provided with the Tap to Pay on iPhone Merchant Incentive Guide.

Marketing Requirements

Below are the required marketing tactics for launching Tap to Pay on iPhone. You must leverage the Apple-approved marketing templates which allow for light customization options, including inserting brand colors, custom fonts, custom card art and your logo into the assets.

Marketing Requirements Checklist		
6.1	Required	At launch, a dedicated launch email must be sent to all eligible users. This must leverage the 'Launch' email referred to in the Tap to Pay on iPhone Marketing Guide.
6.2	Required	At launch, an in-app Splash Screen must be made visible to all eligible users at least once. This must leverage the 'Hero' in-app banner referred to in the Tap to Pay on iPhone Marketing Guide.
6.3	Required	At launch, an in-app push notification must be deployed to all eligible users. This must leverage the 'Value Proposition' copy from 'Push Notification' copy guidelines in the Tap to Pay on iPhone Marketing Guide.

With the exception of paid Social Media, Search Engine Marketing and, Display Marketing, you should not undertake any other "above the line" activity including, but not limited to, Out-of-home, TV, Radio, Podcast, Print, Influencers or Advertorial for Tap to Pay on iPhone.

Summary of Marketing Requirements

Please note below guidance on marketing Tap to Pay on iPhone. Please refer to the Tap to Pay on iPhone Marketing Guide for full details.

- Read through the Tap to Pay on iPhone Marketing Guide prior to planning and launching your marketing
- Only leverage the Apple-approved marketing assets from the Tap to Pay on iPhone Marketing Toolkit. You may not develop customized videos, illustrations or photography, or use stock imagery to illustrate Tap to Pay on iPhone in any of your channels or in your app
- You may not create illustrations or icons that depict iPhone or Tap to Pay on iPhone
- You should only use the imagery based on your region
- Always refer to Tap to Pay on iPhone in your marketing. Never shorten the capability to Tap to Pay or include Apple in the name
- Tap to Pay on iPhone should be in full General Availability when you launch your marketing
- You should leverage the Apple-developed Merchant Education API for your in-app merchant education requirements
- You should read through the Tap to Pay on iPhone Merchant Incentive Guide prior to planning and launching any merchant incentives

How to access the Marketing Guide and Toolkit
